Node.js Tasks

You will build part of small Nursery, the system will have only one administrator with static username and password, teachers and children. Teachers should register first, and administrator will add children to the system. Back end will be created as RESTFUL API with json responses with correct status code.

Requirements :

1- finish all endpoints validations
2- connect to mongoDB
3- create a swagger documentation for all your end points
4- create the project env file and save the following inside (secret key, DB url , port number)
5- encrypt password in the database
6- upload profile pictures for all teachers and children (when insert new user or update profile)
7- add change password end point
8- connect your project with github during development phase
